

# D&R Canal Restoration Dredging

## Franklin Township, NJ

This project involves the restoration of original construction depth of 10.5 miles of the Delaware and Raritan Canal in Franklin Township, Somerset County to support on-going drinking water demand.

ACT Engineers, Inc. as part of the Design Team, established the project survey control, and base mapping, defined the regulatory limits along the project length and coordinated with project staff to minimize anticipated project impacts.. In addition, ACT coordinated with Federal and State regulators, County and Municipal officials, business owners, and residents to solicit feedback and comments to be incorporated into the final design of the project.

**Completion Date**  
Projected: 2014

**ACT's Role**

- Topographic & Boundary Surveys
- Regulatory Analysis of Concept Plans
- Flood Hazard Permitting
- Soil Conservation Permitting
- Overall Permit Coordination
- Public Outreach/Community Involvement

**Project Features**

- Linear park
- Historic land field
- Flood Hazard Permitting
- Dredge Methodology Regulatory Analysis
- On-going Public Use of Project Area
- Informational Web Page Development
